Cheatsheet

Version 0.8 - © 2023,2024 by Frank Hofmann Essential Linux Commands ✓ info@efho.de. Published under Creative Commons CC-BY-SA 4.0 International License. Created with ETEX. https://github.com/hofmannedv/cheatsheets.

System information and administration

blkid	List the block devices, and its ids
cfdisk, fdisk	Alter the partition table
cpuid, lscpu	List detailed cpu information
df, dfc, duf	Show available disk space
du, duf	Show disk space usage
free	List both available and used memory, and SWAP space
halt, poweroff,	Stop the system
shutdown	
journalctl	Query the systemd journal
lsblk	Display information about the system's block devices
lsdev, lshw	Display information about installed hardware
lsof	List open files
lspci	List all pci devices
lsusb	List all usb devices
mailq	Listing of the contents of the mail queue on the stan-
	dard output
reboot	Reboot the system
systemctl	Reboot the system
systemd-cat	Connect a pipeline or program's output with the jour-
	nal
uname	Display the Linux kernel that is in use
uptime	Display the time the system is already up and running

Find files and directories

find	Find files, and directories by various criteria
locate	Find files, and directories by name based on the locate
	database
updatedb	Initialize, and update the locate database

3 File and directory operations

cd	Change to a directory
ср	Copy a file
file	Identify the file type
ln	Create a link
ls	List the contents of a directory
mkdir	Create a directory
mmv	Rename, or move multiple files, or directories
mv	Rename, or move a single file, or directory
pwd	Print the current working directory
rm	Remove one or more files, or directories
rmdir	Remove an empty directory
touch	Create an empty file, or update the timestamp of an existing file
umask	Set file mode creation mask

4 Package management (selection)

apt, apt-get, aptitude, synaptic	Install, update, and remove software packages 1
apt-cache	Manage, and query the package cache 1
dpkg	Install, update, and remove software packages 1
dpkg-reconfigur	Reconfigure package configuration 1
rpm, yum	Install, update, and remove software packages 2
Notes:	

1: Debian GNU/Linux, Ubuntu, and Linux Mint

2: RedHat Linux, Fedora, and OpenSuse

Network commands

dhclient	Request a dynamic IP address
host	DNS lookup utility
hostname	Display the system's hostname
ifconfig,	Configure network interfaces, and display interface
iwconfig	configuration (deprecated)
ifup	Enable a network interface
ip	Configure network interfaces, and display interface
	configuration
ifdown	Disable a network interface
iwlist	List available wireless networks
nc, netcat	TCP/IP swiss army knife
netstat, ss	Display network statistics
nslookup	Lookup name service entries
ping, ping6	Send ICMP package to a host
route	Display routing table
tcpdump	Dump traffic on a network
traceroute,	Print the route packets trace to network host
traceroute6	

Secure data transfer

rsync, scp	Synchronize data locally, or remotely using a secure, encrypted channel
ssh	Connect to a remote system using a secure, encrypted channel
ssh-copy-id	Transfer an SSH public key to a remote system for password-less authentification
ssh-keygen	Generate an SSH key pair for password-less authen- tification

7 Using pagers

less, more	Display data page by page
most	Display data page by page, and in multiple windows

8 Users, groups, and access control

addgroup	Add a new group 1
adduser	Add a new user 1
chage	Modify the duration a user account is valid
chgrp	Modify the group of a file, or directory
chmod	Modify the access rights of a file, or directory
chown	Modify the owner of a file, or directory
delgroup	Remove an existing group 1
deluser	Remove an existing user 1
getent	Lookup user information in local databases
groupadd	Add a new group 2
groupdel	Remove an existing group 2
groupmod	Modify an existing group 2
id	Display user information
last	Show last login time for a user
passwd,	Modify password for a user account
usermod	
pwgen	Generate a random password
su	Switch to a different user account
sudo	Run command as administrative user
useradd	Add a new user 2
userdel	Remove an existing user 2
usermod	Modify an existing user 2
users, w, who	List logged-in users
wall	Write a message to all users currently logged in
whoami	Display current user name
Notes:	

1 High-level tool 2 Low-level tool

9 Getting help

apropos	Display a short help text explaining the given command
info	Get help using the GNU Info system
man	Display an extended help text explaining the given command
manpath	Manage the path for manual pages
whatis	Looks up the index database for short help texts ex- plaining the given command

10 Processes and job control

bg	Send process to the background
fg	Bring a process into the foreground
htop, top	A process monitor
jobs	List running jobs
kill	Send a signal to a process
killall	Send a signal to a number of processes
nice, renice	Modify the nice level of a process
pgrep	Find a process by its name, or by Regular Expression
pkill	Look up or signal processes based on name and other attributes
ps	List running processes
pstree	Display processes as a tree structure
pwdx	Display the working directory of a process
sleep	Pause the execution of commands
watch	Execute a program periodically, showing output fullscreen

11 Text and data stream processing

awk		Alter, or extract data from text files preferably by col- umn
cat		Output a file from top to bottom
cmp, dif	f	Compare two files, and show the differences between them
colrm		Remove a column from a file
column		Display data column-wise
cut		Extract data from text files by column
egrep, grep	fgrep,	Filter text files by pattern line-wise
head		Print a specified number of lines beginning at the top of a file
hexdump		Output data as hexadecimal characters
nl		Output a file, and add line numbers
paste		Combine single files into one
sed		Modify a file line-wise
sort		Sort a file
split		Split a file based on conditions
tac		Output a file from bottom to top
tail		Print a specified number of lines beginning at the bottom of a file
tr		Replace text in a file
uniq		Report, or remove duplicate lines
tee		Read from stdin, and print to both a file, and stdout
WC		Count lines, words, and characters of a file

12 Dealing with log files

logger	A shell command interface to the syslog system log module
logrotate	Rotates, compresses, and mails system logs

13 Handling file systems

e2fsck, fsck	File system check
mkfs	Create a file system
mkswap	Prepare a partition for SWAP usage
mount	Mount a file system
swapoff	Disable a SWAP partition
swapon	Ensable a SWAP partition
tune2fs	Modify existing file system
umount	Unmount a file system

14 Working with terminals and shells, adjust the working environment

alias List, or alter aliases for commmands clear Clear the screen echo Output text on the screen env Display the environment variables exit Quit the current shell session history Display the previously used commands screen, tmux A terminal multiplexer set Enable, or change a run-time parameter time Measure the execution time of a command type Identify command type unalias Remove an alias for a command unset Remove, or disable a runtime parameter whatis Lookup the index database for command descriptions whereis Lookup the binary files, source code files, and manual pages for a command which Identify which command will be run by the shell xargs Build and execute command lines from standard input		
echo Output text on the screen env Display the environment variables exit Quit the current shell session history Display the previously used commands screen, tmux A terminal multiplexer set Enable, or change a run-time parameter time Measure the execution time of a command type Identify command type unalias Remove an alias for a command unset Remove, or disable a runtime parameter whatis Lookup the index database for command descriptions whereis Lookup the binary files, source code files, and manual pages for a command which Identify which command will be run by the shell	alias	List, or alter aliases for commmands
exit Quit the current shell session history Display the previously used commands screen, tmux A terminal multiplexer set Enable, or change a run-time parameter time Measure the execution time of a command type Identify command type unalias Remove an alias for a command unset Remove, or disable a runtime parameter whatis Lookup the index database for command descriptions whereis Lookup the binary files, source code files, and manual pages for a command which Identify which command will be run by the shell	clear	Clear the screen
exit Quit the current shell session history Display the previously used commands screen, tmux A terminal multiplexer set Enable, or change a run-time parameter time Measure the execution time of a command type Identify command type unalias Remove an alias for a command unset Remove, or disable a runtime parameter whatis Lookup the index database for command descriptions whereis Lookup the binary files, source code files, and manual pages for a command which Identify which command will be run by the shell	echo	Output text on the screen
history screen, tmux A terminal multiplexer set Enable, or change a run-time parameter time Measure the execution time of a command type Identify command type unalias Remove an alias for a command unset Remove, or disable a runtime parameter whatis Lookup the index database for command descriptions whereis Lookup the binary files, source code files, and manual pages for a command which Identify which command will be run by the shell	env	Display the environment variables
screen, tmux set Enable, or change a run-time parameter time Measure the execution time of a command type Unalias Remove an alias for a command Unset Remove, or disable a runtime parameter Whatis Lookup the index database for command descriptions whereis Lookup the binary files, source code files, and manual pages for a command which Identify which command will be run by the shell	exit	Quit the current shell session
Enable, or change a run-time parameter time Measure the execution time of a command type Identify command type unalias Remove an alias for a command unset Remove, or disable a runtime parameter whatis Lookup the index database for command descriptions whereis Lookup the binary files, source code files, and manual pages for a command which Identify which command will be run by the shell	history	
time Measure the execution time of a command type Identify command type unalias Remove an alias for a command unset Remove, or disable a runtime parameter whatis Lookup the index database for command descriptions whereis Lookup the binary files, source code files, and manual pages for a command which Identify which command will be run by the shell	screen, tmux	A terminal multiplexer
type unalias Remove an alias for a command unset Remove, or disable a runtime parameter Whatis Lookup the index database for command descriptions Whereis Lookup the binary files, source code files, and manual pages for a command Which Identify which command will be run by the shell	set	
unalias unset Remove, or disable a runtime parameter whatis Lookup the index database for command descriptions whereis Lookup the binary files, source code files, and manual pages for a command which Identify which command will be run by the shell	time	Measure the execution time of a command
unset Remove, or disable a runtime parameter Whatis Lookup the index database for command descriptions Whereis Lookup the binary files, source code files, and manual pages for a command Which Identify which command will be run by the shell	type	
whatis whereis Lookup the index database for command descriptions Lookup the binary files, source code files, and manual pages for a command Which Identify which command will be run by the shell	unalias	Remove an alias for a command
whereis Lookup the binary files, source code files, and manual pages for a command which Identify which command will be run by the shell	unset	Remove, or disable a runtime parameter
pages for a command which Identify which command will be run by the shell	whatis	
	whereis	
xargs Build and execute command lines from standard input	which	Identify which command will be run by the shell
	xargs	Build and execute command lines from standard input

15 Handling the Linux kernel

dmesg	Display, and control the kernel ring buffer
insmod	Insert (activate) a kernel module into the currently running Linux kernel
lsmod	List the kernel modules from the currently running Linux kernel
modprobe	Try to insert (activate) a kernel module into the currently running Linux kernel
rmmode	Remove (deactivate) a kernel module from the cur- rently running Linux kernel
uname	Display information about the currently running Linux kernel

16 Printing

lp, lpr	Print files, or change an existing printing job
lpc	Manage printers
lpq	Display the contents of the printer queue
lprm	Remove an existing job from the printer queue

17 System time, date, calendar, and locales

cal, ncal	Display a calendar
date	Display a date in various formats
hwclock	Manage both the hardware, and the system clock
locale	Display information about the current locale
ntpdate,	Retrieve the time information from an NTP server
ntpsec-ntpdate	
timedatectl	Control the system time and date

18 Archives and data compression

bunzip2	Unpack a compressed file (bzip2 format)
bzcat	Output file content to stdout from a compressed file (bzip2 format)
bzegrep, bzfgrep, bzgrep	Search in a bz-compressed file
bzip2	Compress a file (bzip2 format)
gunzip	Unpack a compressed file (gzip format)
gzip	Compress a file (gzip format)
tar	Create, and manage a tape archive (tar file)
unzip	Unpack a compressed file (zip format)
XZ	Compress a file (xz format)
xzcat	Output file content to stdout from a compressed file (xz format)
xzegrep, xzfgrep, xzgrep	Search in a xz-compressed file
zip	Compress a file (zip format)
zcat	Output file content to stdout from a compressed file (zip format)
zegrep, zfgrep, zgrep	Search in a zip-compressed file

19 System libraries

ldd	Print shared library dependencies
ldconfig	Configure dynamic linker run-time bindings

Notes

·
